EDUCATION

Stevens Institute of Technology, Hoboken, NJ

Sep 21-Dec 22

Master (Computer Science) **GPA:** 3.96 out of 4

Related Courses: Web Programming (Back-End), Distributed Systems and cloud computing, DBMS, Web Programming 2 (Front-End), Data Structure and Algorithms

SRMCEM, India

Aug 13-Aug 17

Bachelor (Computer Science)

Related Courses: Data Structures, Algorithms, Web Technology, Computer Networks, DBMS

SKILLS

- **Web Technology:** React.js, React Query, React Router, Redux, Socket.io, GraphQL, HTML5, CSS, Ajax, Gulp.js, Firebase, Tailwind CSS, Vue.js, SASS, JSON, Bootstrap, Node.js, Restful API, Axios, NPM, Jest, React Native, Material UI
- **Programming Languages:** JavaScript (ES6+), C++, TypeScript, Python
- **Databases:** MySQL, PostgreSQL, MongoDB, Redis, DynamoDB
- **Frameworks and Tools:** Express.js, Next.js, Vite.js, Expo, Django, Git, Jira, Amazon EC2, Amazon SES, AWS lambda

EXPERIENCE

Global Logic, Noida, India

Jul 25-Present

Software Developer

Project: Valuations platform to determine the economic value of renewable energy and natural resources over time, helping customers assess profitability, risks, and make informed investment decisions.

Technology: React.js, Typescript, SASS, Nest.js, GraphQL, SQL, Jest

- Developed responsive micro front-end interfaces using React.js, TypeScript, and SASS, ensuring a seamless and scalable user experience for valuation analytics
- Implemented API integrations with GraphQL and Axios, enabling efficient data retrieval and dynamic visualization of asset valuation insights
- Built and maintained backend services with Nest.js, applying clean architecture principles for modular and performant business logic
- Ensured code quality and reliability through Jest unit testing, Zod schema validation, and automated linting/formatting with ESLint and Prettier
- Optimized monorepo workflows using Lerna, streamlining shared component development and dependency management across multiple modules
- Authored and optimized SQL queries and integrating with APIs and services.
- Worked across the full stack, contributing to Nest.js backend modules, DTOs, controllers, and data-access layers.

Pro-tek Consulting, Columbus, OH

Feb 23-Mar 25

Software Developer

Project: Wealth Management System for improving the efficiency of trading operations. An investment dashboard for users to see their investment portfolio performance and information and trends about other investments like options, mutual funds, and stocks

Technology: React.js, Typescript, SASS, React Query, GraphQL, Jest

- Made micro front-end applications using React.js and Typescript. Overhauled reusability using custom hooks
- Consumed backed APIs and services using Axios, React Query and GraphQL
- Leveraged react router for routing and Jest for unit testing with more than 80% coverage
- Increased user engagement by introducing features and ensuring accessibility depending on user type
- Flagged and tested new feature using split.io and wiremock
- Monitored user interactions using analytics events

Compitek IT Services, New Delhi, India

Oct 17-Mar 21

Software Developer

Project: Front end and full stack applications including content management, e-commerce, user and client management, and SEO analytics reporting

Technology: MongoDB, React.js, Express.js, Node.js, Redis, Redux, Typescript

- Collaborated in developing web services using the MERN stack as a primary technology
- Developed single-page applications by employing React Lifecycle methods and React hooks
- Enhanced the response time of APIs by 100% by implementing in-memory cache using Redis, useMemo, and useCallback
- Performed Authentication and Authorization by using express session for Node.js applications
- Employed Jest for writing unit tests and Postman for testing Restful APIs endpoints
